1. Create a Project Plan. (Workout Tracker, Assignment Tracker, etc.). Explain it in a separate word File. Explain your whole idea (along with words better come up with some visual, keep in mind, a picture worth a thousand words).

GiGGLE- An online database used by venues to track performer's gigs. Can use the program to add, modify, delete, and view gigs booked at the venue. Gigs have certain attributes, like "Performer(s) Name", "Description", "Show Date", "Show Time", "Show Duration", and "Ticket Price". I'd imagine that this is some base program that each venue would register with, and would display the database through the venue's website (eg. Pub X and Theater Y both sign up for Giggle, and display their own gigs on their own websites, so Theater Y gigs are not shown on the Pub X database). Because of this, I'm going to forgo a location entry to the database, as the location would be the same for all gigs.

I think the table would look something like (but less squished):

Performer name	Description	Date	Time	Duration	Ticket Price	Edit	Delete
The Fake Name Band	Listen to THIS	21st November, 2025	11:59pm	90 min	$ 15	*button*	*button*

I think the color scheme should be bright, including yellow and white, as those colors generally correlate to feelings of happiness, which is exactly what GiGGLE is trying to achieve. The shade of yellow will be ffd500, as it's a very warm color, yellow but bordering on gold. The color scheme will also feature black, but only for small details like text, so that it stands out and will be accessible.

I also think that GiGGLE should have some sort of logo, so that the brand can be easily identified. I came up with a lot of different variations and attempts, but here is the one I am most happy with. From the get go, I thought the 'i' could be replaced with some object, but I struggled to think of what that would be. At first, I did a microphone, but I ultimately settled on a simple rendition of a banjo. This is in reference to the fact that GiGGLE is made for displaying gigs, like that of a band, and the banjo is an instrument that could be played in such gigs. The banjo icon used is public domain, and so I can use it freely in this project. It's from this source: https://www.svgrepo.com/svg/18163/banjo
